

## SPECIFICATIONS

### GENERATOR Model# 4791

- AC voltage: 120V (single phase)
- 3400 watts on LP gas (LP tanks sold separately)
- Output amps @ 120V: 28.3
- Manual exerciser function
- Battery (Included): Type U1 (12 volt)
- Dimensions: 34"L x 20"W x 38"H
- Weight: 275lbs.

### ENGINE

- Generac OHVI®
- Displacement: 220 cubic centimeters
- 7.8HP @ 4200 RPM
- Cylinders - Single
- Full pressure lubrication
- Safety shutdowns:
  - Low oil level / Low oil pressure
  - Overspeed/overcrank / High temperature

### POWER TRANSFER MONITOR

- 15 Amp 250 Volt
- 2 Pole
- UL 1008 Listed
- NEMA 1 (Indoor rated)
- Circuit breaker protected
- Dual GFCI outlet sets
- Indicator lamps:
  - White (generator power)
  - Green (utility available)
- Dimensions: 13"L x 5-7/8"W x 3-1/8"D

### ASK FOR IT!

For your safety and potential liabilities, Centurion Home Standby Generators and transfer switches are UL Listed.

Choose which  
 appliances remain  
 operational  
 whether or not  
 there is a power  
 outage.

When utility power  
 fails, two extra 120V  
 circuit breaker  
 protected  
 receptacles are  
 available  
 for multiple  
 plug uses.

**THE ONLY  
 INSTALL-IT-YOURSELF  
 AUTOMATIC HOME STANDBY  
 GENERATOR ON THE MARKET**

**EASY  
 INSTALLATION**

*Everything comes  
 pre-wired!*

LP tanks sold  
 separately.

**Easy as 1, 2, 3**

**MOUNT** the Power Transfer Monitor withing 6 feet of an electrical outlet, then plug the Power / Sensing Cord into a house outlet and the appliances you want protected into the Switched duplex outlet on the Power Transfer Monitor.

**DRILL** a 1" hole in the exterior wall to run the Pre-Wired Conduit through to the generator outside the building within 15 ft. of the Power Transfer Monitor and connect the four wires to the back of the generator.

**HOOK-UP** two 20 lb. LP tanks (not included) to the fuel regulator and you'll have automatic protection.

The **CENTURION with 4X POWER** is a pre-packaged, permanently installed, automatic generator system that is the first true DIY standby generator. The system is designed to supply electrical power to a home's essential items and runs off of two common LP tanks. An indicator on the automatic changeover regulator signals when the first tank is empty. Switching to the reserve tank is automatic.

When utility power fails the **Power Transfer Monitor** signals the generator to produce electrical power for the units GFCI outlets. In 30 seconds or less you have the backup power you need . . . automatically.

**CENTURION SYSTEM INCLUDES:**

- **GENERATOR** with mounting pad
- **POWER TRANSFER MONITOR** • **STARTING BATTERY**
